Joy Communications Remains at the Forefront of the Telecommunications Industry by Expanding its Offering to Include State-of-the-Art Fleet Management Solutions

*Reseller Relationship with Networkcar®
Enables Customers To Take Advantage of
Cost-Effective GPS Tracking Systems*

Stuart, FL — November 17, 2005 — Joy Communications, an industry leader in telecommunications, announced today that the company has formed a reseller relationship with Networkcar, the leading provider of services for remotely monitoring the performance and location of fleet vehicles. Joy Communications will offer Networkfleet, Networkcar's wireless in-vehicle technology solution, which merges patented remote diagnostic systems with GPS-based Automatic Vehicle Location technology. This relationship enables Joy Communications to become the first telecommunications company to provide its customers with such a high level fleet management solution in its service area.

Networkfleet, winner of the 2005 *Telematics Update Magazine's* Best Commercial Vehicle Solution Award, helps fleet operators reduce operating costs and improve productivity by providing remote online access to detailed vehicle information ranging from vehicle location to fuel efficiency trend data, 24/7. Vehicle location and diagnostics information enable fleet managers to reduce operating costs,

improve driver productivity and more efficiently manage their assets.

Networkcar's patented diagnostic information is a key tool that allows fleet managers to identify problems at an early stage and take a more aggressive approach to maintenance. The results are increased fleet vehicle uptime and decreased costs. By getting immediate access to Networkcar vehicle speed reports, idle time data and fuel efficiency trends, fleet managers can improve driver behavior and vehicle condition and lower costs associated with accidents, poor driving habits and less than optimal maintenance regimes.

"At Joy Communications, we have the exact same issue as our customers do when it comes to effectively managing a fleet of vehicles. We're constantly on the road servicing thousands of businesses in the area and we need to do it as efficient as possible," said Peter Engle, President for Joy Communications. "After conducting a thorough analysis of fleet management solution providers, we identified Networkcar as an ideal partner because of their superior technology and the phenomenal reputation they have in the industry. Their value proposition was so powerful that we felt it was important to introduce such an innovative tool to

our customer base. We strongly believe that it is our duty as our customers' telecommunications provider to bring solutions that increases their profitability and gives them a competitive advantage in their marketplace."

ABOUT JOY COMMUNICATIONS

Joy Communications, founded in 1982, with offices in Stuart, Tampa, and Miami, is a multi-million dollar private company with over 6,000 customers in South Florida and Tampa/St. Petersburg. Joy Communications sells and services telecom equipment including Mitel, Samsung, and Nortel, and provides data equipment and services.
